## Game Developer

I am a 3D/2D game developer and app developer, with experience in adding FireBase to IOS/Android applications, I entered the games and applications industry in the early days of my academic career, driven by an interest and love for high tech and a passion for games. I have over 2 years of professional experience with Unity, and over 5 years of experience with proprietary C# engines in mobile games despite many exciting experiences with freelancers on Upwork. I am creative, self-motivated, critical thinker, excellent communicator, very passionate about games, and a good analyst.

---
